Overview

What is Datarizer Holy Bible Concordance?

Datarizer Holy Bible Concordance is an application that makes it easy to search the bible scriptures, not limited to “keywords” like the previous concordances. The application gives more flexibility in terms of scripture search, mobility and manipulation. The search results are not always what the user wants, that is why we have build in a Selection Tool to further select the scriptures that you need and clear the rest, this is called customization. Export your scriptures to Notes and do some additions and then export the Note File to Microsoft Word for more editing. Interfacing with Microsoft word exposes your Notes to a powerful text editor for more editing and other formatting tools. Notes could be transferred to e-mail, because they are actually individual files. All these could be done without typing at all.

Why this Bible Concordance?

1. The search methodology engineered into this software is amazing. These are few search methods you can use:-
 - The “Keyword/s” search method.
 - The “phrase” search method.
 - The “Concept Search” method. New method.
 - Search with incorrectly spelled “keyword/s”, you type in what you know.
 - Testament, Bible books, chapters, verses and Bible headings, all these could be used to search the Bible simultaneously.
2. Select the Bible language familiar to you in terms of grammar and vocabulary. It is an important prerequisite when applying the “Concept Search” methodology. Six Bibles are available to choose from, Afrikaans Bible included.
3. Scripture Screen Saver that fires up when inactive for more than 60 seconds.
4. Interfacing with Microsoft Word application.

5. Parallel Bible searching. OBR.
6. Write your own Notes and save them.
7. Windows based design.
8. All information is saved locally on your Personal Computer or Notebook.

See Section 5.

 Export Custom to Quick

 Open Notes

 Import Custom to Notes

Application User Interface

The Main window is divided into three views on tabs, namely “**Sheet View**”, “**Quick View**” and “**Custom View**”. These views populate the same information differently depending on the selections.

- **Sheet View** - Populates information in a spreadsheet type view. Every time you execute search, all information will be viewed in this format. See Figure 1 below.
- **Quick View** - This view is designed for reading. You must first select before information is populated in this view. Executing search does not affect this view, unless selected in a Search Window as in Figure 5. See Figure 2 below.
- **Custom View** - This view operates the same as “Quick View”, except that, you can select scriptures and discard scriptures you do not want. This is powerful when manipulating scriptures. Scriptures can be added independently. All the scriptures in this view can be exported to “Quick View”. Scriptures can be imported from this view into the Notes. The reason behind is that, the scriptures in this view have already been filtered to what is required. See Figure 3 in page 5.

The Notes window has Note Files that are saved for future reference. Scriptures can be exported from Custom View to Notes, you can also type additional information.

Figure 1 “Sheet View”

Figure 2 “Quick View”

The **Sheet View** shown in Figure 1 shows all details about scriptures. The columns can be hidden except the scripture column. If you *double click* on the arrow pointing the scripture, the scripture pops out for reading.

Scrolling horizontal to the right, you find the scripture heading from which is emanating.

This Sheet View changes every time you execute a search.

The **Quick View** is designed for reading scriptures, see Figure 2.

If you select the “Quick” checkmark on the search window (Figure 5), each time you execute a search, scriptures will be populated on this View.

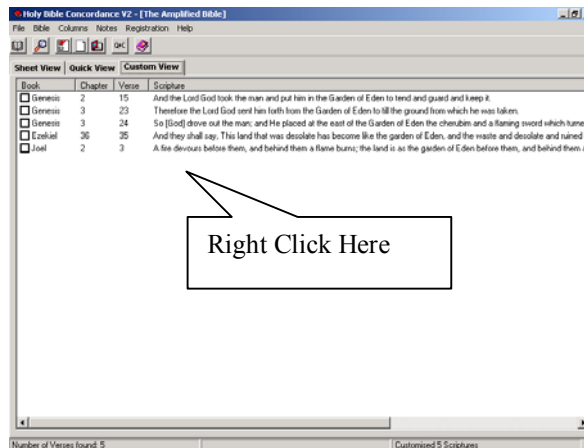

Scriptures from the Custom View can also populate this View. Click

the toolbar button  to export Custom View scriptures to Quick View.

2

Remove unchecked scriptures

Custom View enables the removal of scriptures unwanted. Select the scriptures you need and right *Click* anywhere on the scriptures and *select* “Selected Scriptures” on menu.

Or *Click*  to discard all scriptures not selected.

Scriptures populated in Custom View, selected or not, can be exported to the Notes Window.

Figure 3 “Custom View”

Custom View in Figure 3, the scriptures has a check box that must be selected if you need to discard some of the scriptures. This is the most powerful view of the three.

Notes Window is capable of merging scriptures with visual media as shown in Figure 4.

Interfacing with Microsoft Word makes this very simple indeed. Write your own notes, attach scriptures, put visual media for more explanation.

Export Note Files to MS word application and import MS word documents into the Notes and save as Note Files.

Figure 4 “Notes”

Tip

To merge the scriptures into an existing document, do the following:-

1. Place the cursor where you want to insert the scriptures from Custom View into Notes.
2. Go to menu “Insert=>Selected=>Append”.
3. All the scriptures from Custom View will be inserted where the cursor is placed.
4. Remember Clicking  will insert scriptures from Custom View to Notes clean sheet, or menu “Insert=>Selected=>New” has the same effect.
5. It is important to note the difference between insertion performed in step 2 and step 4.
6. Step 4, clears all on the Notes Window and imports Custom View scriptures therein.
7. Click *Ctrl* + *turn Mouse wheel* to change the font to small or big

3

Click this button to Search

How to Search the Bible scriptures

Two important wild card characters to remember when executing a search. The percentage sign “%” and Underscore sign “_”.

Figure 5 “Search Window”

A Search can be executed using all the textboxes or a combination thereof. For an example:-

1. Type in “God%mercy” in scripture textbox. See Figure 5.
2. Select check mark “Quick”.
3. Click Search button.
4. 42 Scriptures will be populated in Sheet View and Quick View.

All the scriptures populated are of the concept “God’s mercy”, no matter how it is written, what matters are that the verse says something about “God’s mercy”.

Gen 24:27

And he said, "Blessed be the Lord **God** of my master Abraham, who has not forsaken **His mercy** and His truth toward my master. As for me, being on the way, the Lord led me to the house of my master's brethren."

Gen 43:14

And may **God** Almighty **give** you **mercy** before the man, that he may release your other brother and Benjamin. If I am bereaved, I am bereaved!"

Scripture analysis

In both cases, the concept is the same. It is about “God’s mercy”. When you read the entire scripture, you will realize that the scripture is talking about “God’s mercy”.

Take note, this is important. What will other applications results look like, should you specify the phrase “God’s mercy” or “God+mercy”. The results will be all scriptures about “God” plus all the scriptures about “mercy” plus all scriptures about “God’s mercy”. The results are very interesting, **4062** scriptures about “God” plus **267** scriptures about “mercy” subtract **42** scriptures about “God’s mercy”. This equates to **4287** scriptures.

Now, who wants to work with **4287** scriptures versus **42** scriptures? We all do not have time, we need to get exactly what we are looking for. This sounds like an Internet search engine which gives you millions of results within 0.26 seconds and it takes you more than a month to find exactly what you are looking for. There is no point.

This is where the “**Concept Search**” methodology comes in handy. See section 5 for more examples.

4

Remove unchecked scriptures

Export Custom to Quick View

Navigation through Views and Customization

The main purpose of Datarizer Holy Bible Concordance is to extract for you exact scriptures from the Bible in the possible shortest time and with the maximum accurate results. It is therefore important to understand *HOW* to navigate through the view while searching. Get pure and raw scriptures from the Bible, may the Holy spirit lead you.

When searching, the application goes through more than 31000 scriptures and returns a few scriptures that you need. Avoid unnecessary selections that make the system to run slow.

When you first search, start with “Sheet View”. Type in your search criteria in the search textboxes and take note of how many scriptures are returned.

If the scriptures returned are what you are looking for, proceed to select the check mark “Quick” and “Custom”. Click search again and the same result will be populated in “Quick View” and “Custom View”.

Read your scriptures in “Quick View” and do a further filtering in “Custom View” by selecting some scriptures and discarding the unchecked scriptures.

1. *Right Click* anywhere in a “Custom View” area and *click* “Show Selected”
2. or *Click*  to removed all the scriptures that are not check marked.
3. To export all scriptures from “Custom View” to “Quick View” *Click* , and hence C-to-Q.

Printing

1. To print “Sheet View” go to menu *File=>Print=>Sheet View*.
2. To print “Custom View” go to menu *File=>Print=>Custom View*.

The “Quick” and “Custom” check marks.

If you have found scriptures, you may check on these two checkboxes.

Figure 6 “Search Window”

Navigating and searching correctly improves the speed, no error will occur if you do it any other way.

5

Click this button to Search

Advance Searching

Percentage sign (“%”), Underscore (“_”) and Space Characters

Percentage sign (“%”)

These characters play a vital role in terms of searching. Use the percentage sign when you want to execute a search for “**Concept Searching**” as described briefly in section 3. “Concept Searching” is different from Phrase searching. A phrase like “God’s mercy” the application will then result in scriptures containing a phrase “God’s mercy” only, omitting scriptures like {*Gen 24:27 And he said, "Blessed be the Lord **God** of my master Abraham, who has not forsaken **His** mercy and His truth toward my master. As for me, being on the way, the Lord led me to the house of my master's brethren."*}. Looking at this scripture, you will be losing on vital information. “Concept Searching” will use the same phrase “God’s mercy” but separating it by a percentage sign like “God%mercy”. The “Concept Searching” is brought about that, no matter, what the scripture reads like, as long as the concept of “God’s mercy” features somewhere in the scripture, the scripture is relevant.

Underscore sign (“_”)

The underscore character (“_”) is used where one letter could either be any letter in a word with the same meaning. For instance, the word “woman” and “women”. If you need to search both, you can type “wom_n” and the results will include both. You replaced the letter “a” and “e” by an underscore character to search for both at once.

Space character (“ ”)

The space character is used to search for exact keyword/s. An example will make this understandable. Let us take the concept of “Jesus healing the sick”. If you type “Jesus%heal%sick”. You will have all scriptures containing words “heal”, “heals”, “healed” and “healing”. If you want the word “heal” only, type “Jesus%**heal** %sick, please note the introduction of a space between the word “heal” and “% sign”. The results exclude all words except for the word “heal”.

You can become innovative with (“space”), (“%”) and (“_”), combining them all to get results that can blow your mind.

Incorrect keyword spelling search

It was mentioned, that with this new “Concept Search” methodology, you could even search for keyword/s for which you do not know the correct spelling. In this case we will use the concept of “The King of Babylon”. You only type what you remember about the word (his name), what you know is contained for sure and omitting what you do not know or sure of. Suppose you want to bring up his name somewhere in the “Concept Searching”. You are not sure about double “zz” or is it double “rr”

Type “%Nebu%n%z%r%” and *Click Search* button. Your results will be the name of King of Babylon “Nebuchadnezzar”. Type “%Nebu%n%z%r%body%hair%”, *Click Search* button and see the result. The concept here is to find a scripture where Nebuchadnezzar’s body changed and grew hair like animals. As you can see, the “Concept Search” keywords are “Nebuchadnezzar%body%hair”. Read Daniel 4:33.

5

Click this button to Search

Tip

Do not close the Search Window if you have not finished searching, click any other area behind the window and it will be hidden. If you need to search again, Click  and the Search Window returns with the information typed in previously. If you close this window by clicking button “Close” or cross at the top right corner, you will lose all the information you have typed in already.

OBR (Other Bible References)

It is not always possible to search all the scriptures populated in Custom View using another Bible and therefore an OBR was designed to resolve this problem. OBR works with scriptures in Custom View only. Custom View is completely independent in terms of scriptures contained therein.

OBR must be created first before it can be executed on Other Bibles. OBR results will be populated in Custom View as well.

On the Search Window, Click “OBR >>>” button to open the OBR.

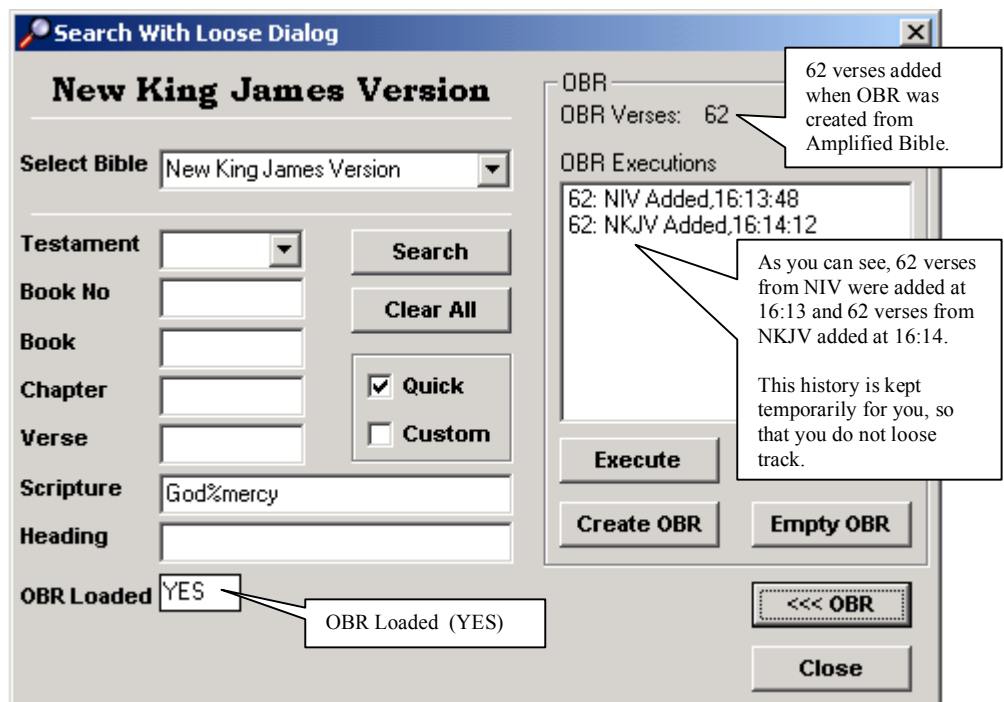

Figure 7 (Search Window, expanded for OBR)

How does OBR work?

1. Suppose you have populated Custom View with scriptures from the Amplified Bible.
2. If you want exactly the same scriptures, but from another Bible, you create an OBR using Amplified Bible scriptures already populated in Custom View.
3. Click “Create OBR” button. Please note OBR verses and OBR Loaded (YES). Now OBR is created and stays loaded until you Empty OBR or Quits the Datarizer Holy Bible Concordance V2.

5

Click this button to Search

4. You can choose to remove all scriptures in Custom View (Amplified Bible scriptures) or append new scriptures from Other Bibles.
5. Now *select* another bible from drop down button “Select Bible” and Click “Execute” button.
6. The scriptures from another Bible will be populated in Custom View.
7. Remember, OBR has nothing to do with what is typed in textboxes of the Search Window. It takes the other Selected Bible and OBR verses and populate the results in Custom View.
8. As you execute the OBR, OBR Executions will be listed as temporary history.
9. OBR is not configured to work with the Afrikaans Bible since, the English verses and Afrikaans verses differ greatly in terms of numbering.

Table

Please go through the table below to see more “**Concept Search**” examples:-

Keyword(s)/Concept	Type in	Search Results
Jesus heal, heals, healed, healing	Jesus%heal	<ul style="list-style-type: none"> • And Jesus said,I will come and heal him. • ...Jesus went about Galilee, ...preaching, ...healing .. • ... because Jesus had healed on the Sabbath; ...
Jesus healing	Jesus%healing	<ul style="list-style-type: none"> • ...Jesus went about Galilee, ...preaching, ...healing .. • ...anointed Jesus...healing all who...by the devil, for..
Jesus healed	Jesus%healed	<ul style="list-style-type: none"> • ...down at Jesus’ feet and He healed them. • But Jesus answered... touched his ear and healed him
Jesus heal	Jesus%heal % Notice space introduction	<ul style="list-style-type: none"> • And Jesus said,I will come and heal him. •
Jesus and wom an or women	Jesus%wom_n Notice the Underscore	<ul style="list-style-type: none"> • When Jesus..saw his motherWoman, behold thy son • ..in the name of Jesus Chris....both men and women...
King of Babylon. Incorrect spelling	%Nebu%n%z%r%	<ul style="list-style-type: none"> • ..Nebuchadnezzar....king of Babylon....
Nebuchadnezzar ‘s body grew hair like a beast.	Nebuchadnezzar%body%hair	<ul style="list-style-type: none"> • ...Nebuchadnezzar ...his body... till his hairs were grown like eagles feathers, and his nails like birds claws. Dan 4:33

Use a combination of all the above to see what a powerful search tool you have with this application.

Adding Individual scriptures to Custom View

1. In the Search Window, check mark “Custom”. Click  to open the Search Window.
2. Add the scripture **3 John 1:11** as following:-
3. In Book No, type “**3**”; in Book, type “**John**”; in Chapter, type “**1**”; in Verse, type “**11**”.
4. Click *Search* button and scripture **3 John 1:11** will be added in Custom View.
5. Known scriptures could be added/appended in this way.

6

-  Open Notes

-  Search Note Files
-  Delete selected Note File
-  Help

Notes Compilation and merging with scriptures

The following can be done in the Notes:-

1. Importing scriptures from Custom View into the Notes Window. Click  to import scriptures. If Custom View contains no scriptures, nothing will be imported.
2. Writing your own notes, adding scriptures between your notes. Not a single scripture needs to be typed. All can be imported.
3. Save the Note Files for future reference.
4. Export these Note Files to Microsoft Word for more editing and formatting tools etc.
5. Import an existing Microsoft Word document into the Notes window and save it as a Note File. Scriptures can be appended on this document and saved again.

Figure 8 (Notes Window)

Note Files

Note Files can be hidden. Click “>>>>” button or go to menu “Zoom=>Increase>>>” To unhide the Note Files, go to menu “Zoom=>Decrease<<<<”.

To open a Note File, Double click on the Note File or select the Note File and Click “Open” button.

To delete a Note File, select and click  and confirm you deletion, alternatively select and click the “Delete” button.

How to export a Note File to Microsoft Word application

1. Select the Note File.

6

Export to MS Word

Search Note Files

Save Note File

2. Click  to export to Microsoft Word application.
3. Your selected Note File will be opened in Microsoft Word.
4. Any changes you made in Microsoft word will be available in the Notes as well.
5. Alternatively, select the Note File and go to menu “File=>Open With MS Word”.

Importing an existing Microsoft Word document

1. Go to menu “File=>Import MS Word Doc”.
2. Select the MS Word document to open and click “Open”
3. Type in the New name for the Note File and Click “Ok”. The original imported file is left untouched.
4. Your file will be shown on the Notes Window and in Note Files.

How to Search for Note File

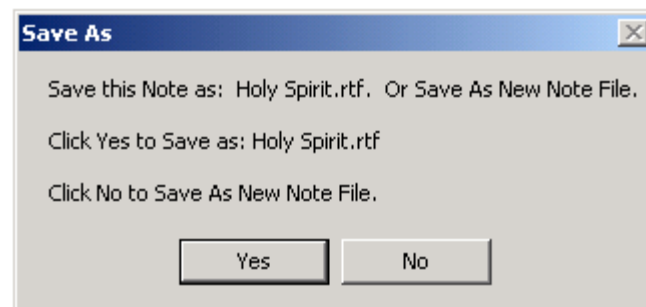

1. Note, Use wild cards like “*”.
2. Click  to search Note Files.
3. Type in between the wild cards (*), as show in the Figure 9.
4. Click the “Search” button.
5. “Double click” on the Note File to open it.
6. You may have to type in an input box before the search window appears.

Figure 9 (Note File Search window)

Saving Note Files

1. Click  and a window shown in Figure 10 pops up.
2. Clicks “Yes” to save with the name stipulated or click “No” to save with a New name.

3. When changes are made to an existing Note File, this option always comes, to save with the same name or save with different name. See Figure 10.

Figure 10 (Saving Note File)

7

Export to MS Word

Microsoft Word Interfacing

Read **Section 6** about Notes interfacing with Microsoft Word.

There is only one reason why the application interfaces with Microsoft Word application. The purpose is to take advantage of editing, formatting tools and the functionality that Microsoft Word application has.

Anyway, information that we have in our possession is currently kept in Microsoft word format. Looking at these reasons, you can see that your information can still work with Datarizer Holy Bible Concordance version 2.

Information can still be send via internet in the Microsoft word format and still be used by friends, pastors, scholars etc. The possibilities are unlimited.

Registration

Registration and Licensing is very simple and straightforward.

There are four STEPS to be followed when registering. The program leads you through all the STEPS, you cannot go wrong. Please follow all STEPS.

STEPS briefly explained.

1. Refer to figure 12 below.
2. Click "Browse" button.
3. Select your Registration File and Click "Open" Button.
4. Click "View Reg Information" button to view if your information is correct.
5. If your information is correct, Click "Register" button.
6. The program will confirm your registration as complete. Click "Close" button.

Figure 12 (*Registration*)

After you have registered, your Licence Information will look like in Figure 13 below. To view your information, go to menu "Registration=>Licence"

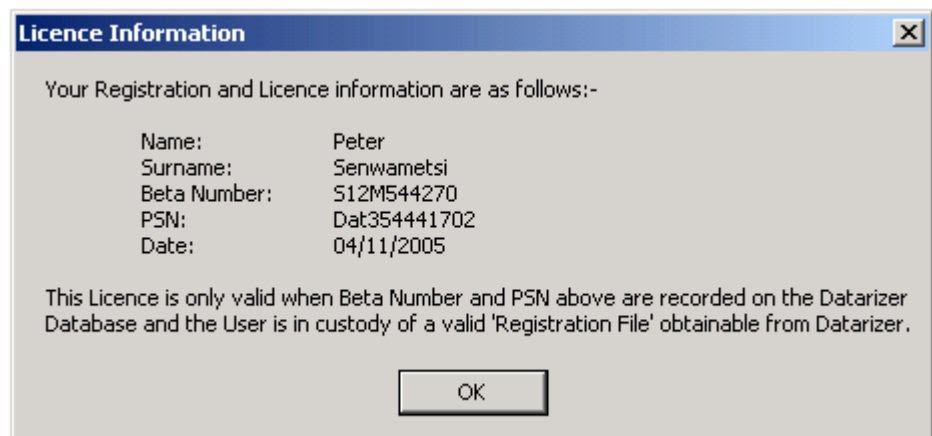

Figure 13 (*License Information*)

Figure 15 (*Other Bibles*)

Loading New Bibles

Downloaded Bible files must be loaded on Holy Bible Concordance V2 as in Figure 16:-

Figure 16 (*Add a New Bible*)

Follow STEP-by-STEP instructions.

It is important to select to correct Bible on menu *Bible=>Add New...*, as well as the matching Bible file, see STEP 1.3 on Figure 17 below. For instance, the New King James version was selected to be loaded as in Figure 17 below.

Loading the Bible takes between 3 minutes to 9 minutes depending on computer Operating System. Faster PC's can even take less than 3 minutes.

All Bibles can be loaded one after the other. Your Personal Computer will be worth more than 217 000 scriptures at your fingertips.

On the last STEP execution, the message will appear confirming the total number of scriptures loaded. Please make sure that scriptures loaded are more than 31 000 per loaded Bible.
